Re: Oil storage tank integrity test
99 Woodland Avenue, Summit, NJ

Dear Mr. Butler and Ms. Powell:

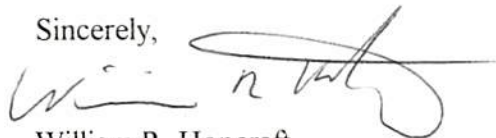

At your request a precision test was performed on May 22, 1999, to assess the integrity of the underground heating oil storage tank at the above referenced site. The technician who conducted the test is licensed by the New Jersey Department of Environmental Protection (NJ DEP). The testing equipment and methodology used meets or exceeds the United States Environmental Protection Agency (US EPA) standards for precision tank testing.

As indicated by the attached report, the test has determined that the storage tank and its appurtenant piping are currently free of leakage.

An unprotected steel tank has an average life expectancy of about twenty-five years. With the likelihood of the storage tank in question being considerably older than that, I recommend that it be decommissioned in the near future as part of a preventative maintenance program.

Please call if I can be of any further assistance.

Sincerely,

William R. Hopcraft
