

SELLER'S PROPERTY CONDITION DISCLOSURE STATEMENT

© 2018, New Jersey REALTORS®

27 Pine Grove Ave Summit, NJ 07901

Property Address: _____

Seller: _____

Mather, Michael & Smith, Andrea

The purpose of this Disclosure Statement is to disclose, to the best of Seller's knowledge, the condition of the Property, as of the date set forth below. The Seller is aware that he or she is under an obligation to disclose any known material defects in the Property even if not addressed in this printed form. Seller alone is the source of all information contained in this form. All prospective buyers of the Property are cautioned to carefully inspect the Property and to carefully inspect the surrounding area for any off-site conditions that may adversely affect the Property. Moreover, this Disclosure Statement is not intended to be a substitute for prospective buyer's hiring of qualified experts to inspect the Property.

If your property consists of multiple units, systems and/or features, please provide complete answers on all such units, systems and/or features even if the question is phrased in the singular, such as if a duplex has multiple furnaces, water heaters and fireplaces.

Re: Site Investigation / Underground Storage Tank
27 Pinegrove Ave
Summit, NJ 07901

Dear Sir/Madam,

A representative from Accurate Tank Testing LLC. (Accurate) surveyed the above property for any evidence of an out of service, #2 fuel oil, underground storage tank.

The internal inspection revealed a single copper oil line in the basement floor adjacent to the existing gas fired boiler. Two concrete patched holes were observed in the right basement foundation wall. This evidence indicates that a 275 gallon aboveground storage tank has been removed from the basement. The residence is currently heated by natural gas.

A magnetic survey was conducted using a Schonstedt Model GA-72CD flux-gate type magnetometer. The magnetometer utilizes two sensors that detect the magnetic field generated by ferromagnetic objects. The difference in magnetic field strength between the two sensors indicates a magnetic field generated by ferromagnetic objects. The presence of a difference in sensor readings indicated an anomalous condition that is manifested by a signal meter indicating strength and polarity. No anomalous conditions consistent with an out of service underground storage tank were detected on the property. *No anomalous conditions consistent with an out-of-service or abandoned underground storage tank were detected on the property.*

Accurate Tank Testing LLC. reserves the right to review the findings of this investigation if any additional information is made available that could materially affect our opinion. Accurate is not responsible for detecting USTs that normally cannot be detected by the methods employed or that cannot be detected because of site conditions.

Average radon level measured

0.2 pCi/l

The average radon level measured was below the United States Environmental Protection Agency (EPA) action level of 4.0 picoCuries per liter of air (pCi/l). Since radon levels can vary significantly from season to season it is advisable to conduct at least one short-term test during the winter heating season. The EPA recommends retesting if your living patterns change or if you begin occupying a lower level of your home, such as a basement.

For more information on radon in your home please consult the EPA booklet: A Citizen's Guide to Radon (EPA Document #402-K-92-001) or contact your state health department official. In New Jersey, call the Radiation Protection Programs, Bureau of Environmental Radiation at (609) 984-5425. Also, the EPA maintains a radon information website, including copies of its publications, at www.epa.gov/iaq/radon. For New Jersey clients, please see the attached guidance document entitled Radon Testing and Mitigation: The Basics.

All procedures used for generating this report are in complete accordance with the current EPA protocols for the analysis of radon in air.
