423 **FLOOD RISK**

424 Flood risks in New Jersey are growing due to the effects of climate change. Coastal and inland areas may experience significant flooding
 425 now and in the near future, including in places that were not previously known to flood. For example, by 2050, it is likely that sea-level
 426 rise will meet or exceed 2.1 feet above 2000 levels, placing over 40,000 New Jersey properties at risk of permanent coastal flooding.
 427 In addition, precipitation intensity in New Jersey is increasing at levels significantly above historic trends, placing inland properties at
 428 greater risk of flash flooding. These and other coastal and inland flood risks are expected to increase within the life of a typical mortgage
 429 originated in or after 2020.
 430

431 To learn more about these impacts, including the flood risk to the Property, visit njreal.to/flood-disclosure. To learn more about how to
 432 prepare for a flood emergency, visit njreal.to/flood-planning.
